INDEX TO SUBJECTS

Action potential and numerical method to model excitable cells 155
Activation of electron transfer reactions of blue proteins 139
Adaptation, light, and sensitivity changes in *Limulus* ventral photoreceptor 105
Algae, micro-, light scatter patterns of pure and mixed asynchronous cultures 29
Amiloride effects on Na transport across rabbit colon blocked and reversed by *p*-mercuribenzene sulfornate 125
Ammonium and bicarbonate-CO_2 effects on intracellular chloride levels in *Aplysia* neurons 131
Anacystis distinguished by light-scatter patterns 29
Anion binding and cation permeation through the gramicidin channel 307
Aplysia neurons, ammonium and bicarbonate-CO_2 effects on intracellular chloride levels 131
Asymmetry current in squid axon membrane, frequency domain analysis 115
Asynchronous cultures of microalgae, distinguished by light-scatter patterns 29
ATP, Mg, concentration and exponential rate processes in chemically skinned rabbit muscle fibers 97
Axon membrane, squid, frequency domain analysis of asymmetry current 115
—, squid giant, exponentiated exponential model of Na^+ and K^+ conductance changes 15

Bacteria, chemotactic, model for traveling bands of 1
Bacterial translation measured by photon correlation spectroscopy 79
Bacteriorhodopsin, energy transfer in 49
—, fluorescence from chromophore 67
— transient, 580-nm ultrafast, kinetics of 121
Bands of chemotactic bacteria, traveling, modeled 1
Bicarbonate-CO_2 and ammonium effects on intracellular chloride levels in *Aplysia* neurons 131
Binding, anion, and cation permeation through the gramicidin channel 307
Biomembranes, deuterated phospholipids as nonperturbing components for Raman studies of 191
Biosynthesis of proteins, role of guanine nucleotides 373
Blue proteins, activation of electron transfer reactions 139
Bulk systems, stoichiometry of lecithin-cholesterol complexes 469

Caffeine contracture and iodoacetate rigor compared in frog skeletal muscle 501
—, effects of incubation after ultraviolet irradiation on nuclear RNA size 393
Calcium^{2+} effect on electrophoretic mobility of chromaffin granules measured by light scattering 341
— injection and light adaptation in *Limulus* ventral photoreceptors, time-course of sensitivity changes 105
Carbon dioxide-bicarbonate effects on intracellular chloride levels in *Aplysia* neurons 131
Cation permeation through gramicidin channel, ions and anion binding 307
Cells, excitable, modeled by numerical method 155
—, human, ultraviolet-irradiated, thymine dimer excision 249
—, mammalian, two-step pyrimidine dimer excision after ultraviolet light 265
—, murine, effects of ultraviolet irradiation and incubation on nuclear RNA size 393
Cesium, effects of anion binding, and cation permeation interactions through gramicidin channel 307
Channel, gramicidin, and interactions in cation permeation 307
—, gramicidin A, kinetics and electrostatic calculations of ion channel 221
—, ion, electrostatic calculations 209, 221
—, ionic, in excitable membranes 283
—, potassium, 3,4,-diaminopyridine blocks 507
Chemotactic bacteria, model for traveling bands of 1
Chlamydomonas distinguished by light-scatter patterns 29
Chlorella distinguished by light-scatter patterns 29
Chloride levels, intracellular, in *Aplysia* neurons, ammonium and bicarbonate-CO_2 effects 131
p-Chloromercuribenzene sulfonate and effect of amiloride on Na transport across rabbit colon 125
Cholesterol-lecithin interactions, equilibrium studies 469, 489
Choline, phosphatidyl-, dispersion phase transitions observed with interference refractometer 37
Chromaffin granules, Ca^{2+} and Mg^{2+} effects on electrophoretic mobility measured by light scattering 341
Chromophore of purple membrane protein, fluorescence from 67
Colon, rabbit, Na transport across, *p*-mercuribenzene sulfonate blocks and reverses amiloride effect 125

Complexes, lecithin-cholesterol, in bulk systems, stoichiometry 469
Concentration dependence of self-diffusion of human and *Lumbricus terrestris* hemoglobin 453
"Condensing" effect of cholesterol and phase relations in lecithin-cholesterol surface films 489
Conductance changes in squid giant axon, exponentiated exponential model 15
Configuration, electronic, of model deoxyheme affects electromagnetic properties 179
Contracture, caffeine, and iodoacetate rigor compared in frog skeletal muscle 501
CORRECTION 521
Correlation spectroscopy, photon, used to measure bacterial translation 79
Current, asymmetry, in squid axon membrane, frequency domain analysis 115

Deoxyheme, model, electromagnetic properties vary with electronic configuration 179
Deuterated phospholipids as nonperturbing components for Raman studies of biomembranes 191
3,4,-Diaminopyridine, potent new K channel blocker 507
Diffusion, self-, of human and *Lumbricus terrestris* hemoglobin, concentration dependence 453
Dimers, pyrimidine, two-step excision, and repair of ultraviolet damage to mammalian cells 249
—, thymine, excision, in ultraviolet-irradiated human cells 249
Dispersion of phosphatidylcholine, phase transitions observed with interference refractometer 37
Dissociation and exponential rate processes in chemically skinned rabbit muscle fibers 97
Distance of iron from the plane of model deoxyheme affects electronic configuration 179
Domain analysis, frequency, of asymmetry current in squid axon membrane 115
Dynamics, molecular, and freezing phase transition in tissues, studied by proton spin relaxation 439

Electric field, intrinsic membrane protein, and nerve excitability study 295
Electromagnetic properties of model deoxyheme vary with electronic configuration and iron-plane distance 179
Electronic configuration of model deoxyheme affects electromagnetic properties 179
Electron microscopy, high-voltage, shows T system helicoids and striations in skeletal muscle fiber 145
— transfer reactions of blue proteins, activation of 139
Electrophoretic light scattering measures Ca^{2+} and Mg^{2+} effects on electrophoretic mobility of chromaffin 341
Electrostatic calculations for ion channel 209, 221
Energy and potential profiles and interactions between ions in electrostatic calculations for ion channel 209
— transfer in purple membrane of *Halobacterium halobium* 49
Equilibrium studies of lecithin-cholesterol interactions 469, 489
Erythrocytes, high-gradient magnetic separation of 171
Escherichia coli, model for chemotaxis of traveling bands 1
— *coli* strains, with and without lambda lysogens, induced radioresistance in 431
Esophagus, nematode, pumping mechanism of 349
Excision repair of ultraviolet damage in mammalian cells 265
— of thymine dimers in ultraviolet-irradiated human cells 249
Excitability, nerve, and interactions of intrinsic membrane protein and electric field 295
Excitable cells modeled by numerical method 155
— membrane, ionic channels in 283
Exponential rate processes in chemically skinned rabbit muscle fibers with changing MgATP concentration 97
Exponentiated exponential model of Na^+ and K^+ conductance changes in squid giant axon 15

Fibers, muscle, exponential rate process and changing MgATP concentration 97
—, skeletal muscle, T system helicoids and striations seen by high-voltage electron microscopy 145
Films, lecithin-cholesterol, surface, cholesterol's "condensing" effect analyzed 489
Fluorescence from chromophore of purple membrane protein 67
Freezing phase transition and molecular dynamics in tissues, studied by proton spin relaxation 439
Frequency domain analysis of asymmetry current in squid axon membrane 115
Frog skeletal muscle, caffeine contracture and iodoacetate rigor compared 501
— skeletal muscle fibers, T system helicoids and striations seen by high-voltage electron microscopy 145

Gating current in squid axon membrane, frequency domain analysis 115
— and ionic channels in excitable membranes 283
Giant axon of squid, exponentiated exponential model of Na^+ and K^+ conductance changes 15
Gompertz kinetics of Na^+ and K^+ conductance changes in squid giant axon 15
Gradient, high-, magnetic separation of erythrocytes 171
Gramicidin channel, and interactions in cation permeation 307
— A channel kinetics and electrostatic calculations for ion channel 221
Granules, chromaffin, Ca^{2+} and Mg^{2+} effects on electrophoretic mobility measured by light scattering 341
Guanine nucleotides in protein biosynthesis 373

Halobacterium halobium, energy transfer in purple membrane of 49

Halobacterium halobium, fluorescence from chromophore of purple membrane protein 67
— *halobium*, kinetics of 580-nm ultrafast bacteriorhodopsin transient 121
Head rotation or dissociation, exponential rate processes in chemically skinned rabbit muscle fibers 97
Helicoids in T system and striations of frog skeletal muscle fibers seen by high-voltage electron microscopy 145
Heme, deoxy-, semiempirical calculations of model, electromagnetic properties vary with electronic configuration 179
Hemoglobin, human and *Lumbricus terrestris*, concentration dependence of self-diffusion 453
Heterogeneous nuclear RNA, effects of ultraviolet irradiation and incubation on size 393
High-gradient magnetic separation of erythrocytes 171
High-voltage electron microscopy, T system helicoids and striations of frog skeletal muscle fibers 145
Histograms, interval, and post-stimulus time, relationship to timing characteristics of spike trains 413
Human cells, thymine dimer excision after ultraviolet irradiation 249
— hemoglobin, concentration dependence of self-diffusion 453
Hydrogen, anion binding effects, and cation permeation through gramicidin channel 307

Incubation, postirradiation, effect on nuclear heterogeneous nuclear RNA size in murine cells 393
Induced radioresistance in *Escherichia coli* strains with and without lambda lysogens 431
Interference refractometer used to observe phosphatidylcholine phase transitions 37
Interval histograms, and post-stimulus time, relationship to timing characteristic of spike trains 413
Intracellular chloride levels in *Aplysia* neurons, effects of ammonium and bicarbonate-CO_2 131
Intrinsic membrane protein, electric field, and nerve excitability study 295
Iodoacetate rigor and caffeine contracture compared in frog skeletal muscle 501
Ion channel, electrostatic calculations 209, 221
— interactions, energy and potential profiles in electrostatic calculations for ion channel 209
— interactions in cation permeation through gramicidin channel 307
Ionic channels in excitable membranes 283
Iron, distance from plane affects electronic configuration of model deoxyheme 179
Irradiation, ultraviolet, and postirradiation incubation effects on nuclear RNA size in murine cells 393

Lambda lysogens in strains of *Escherichia coli*, and induced radioresistance 431
Lecithin-cholesterol interactions, equilibrium studies 469, 489
Light adaptation and Ca injection in *Limulus* ventral photoreceptors, time-course of sensitivity changes 105
—-scatter analysis of microalgae, scatter patterns of pure and mixed asynchronous cultures correlated 29
— scattering, electrophoretic, measures Ca^{2+} and Mg^{2+} effects on mobility of chromaffin granules 341
— scattering used to measure bacterial translation 79
Limulus ventral photoreceptors, time-course of sensitivity changes due to light adaptation and Ca injection 105
Lipids, deuterated phospho-, as nonperturbing components for Raman studies of biomembranes 191
Lithium, anion binding effects, and cation permeation through gramicidin channel 307
Lumbricus terrestris hemoglobin, concentration dependence of self-diffusion 453
Lysogens, lambda, in strains of *Escherichia coli*, and induced radioresistance 431

Magnesium ATP concentration and exponential rate processes in chemically skinned muscle fibers 97
Magnesium^{2+} effect on electrophoretic mobility of chromaffin granules measured by light scattering 341
Magnetic resonance, nuclear, proton spin relaxation study of molecular dynamics and freezing phase transition 439
— separation of erythrocytes, high-gradient 171
Mammalian cells, two-step pyrimidine dimer excision after ultraviolet light 265
Membrane, deuterated phospholipids as nonperturbing components for Raman studies of 191
—, excitable, ionic channels in 283
—, intrinsic protein, electric field, and nerve excitability study 295
— protein, purple, fluorescence from chromophore 67
— protein, purple, kinetics of 580-nm ultrafast transient 121
—, purple, of *Halobacterium halobium*, energy transfer in 49
—, squid axon, frequency domain analysis of asymmetry current 115
Microalgae, pure and mixed cultures, light scatter patterns of 29
Microscopy, high-voltage electron, shows T system helicoids and striations in skeletal muscle fibers 145
Mobility, electrophoretic, of chromaffin granules, Ca^{2+} and Mg^{2+} effects measured by light scattering 341
Molecular dynamics and freezing phase transition in tissues studied by proton spin relaxation 439
Motility, bacterial, measured by photon correlation spectroscopy 79

Murine cells, effects of ultraviolet irradiation and incubation on nuclear RNA size 393
Muscle fibers, rabbit, chemically skinned, exponential rate processes and MgATP concentration 97
— fibers, skeletal, T system helicoids and striations seen by high-voltage electron microscopy 145
—, skeletal, caffeine contracture and iodoacetate rigor compared 501

Nematode esophagus, pumping mechanism of 349
Nerve cells, numerical method to model 155
— excitability study and interactions of intrinsic membrane protein and electric field 295
Neurons, *Aplysia*, ammonium and bicarbonate-CO_2 effects on intracellular chloride levels 131
Nonperturbing components for Raman studies of biomembranes, deuterated phospholipids as 191
Nuclear magnetic resonance, proton spin relaxation study of molecular dynamics and freezing phase transition 439
— RNA size, effects of ultraviolet irradiation and incubation on, in murine cells 393
Nucleotides, guanine, in protein biosynthesis 373
Numerical method to model excitable cells 155

Peristaltic pump of nematode esophagus 349
Permeation, cation, through gramicidin channel, ions and anion binding 307
Phase relations in lecithin-cholesterol surface films, "condensing" effect of cholesterol 489
— transition, freezing, and molecular dynamics in tissues, studied by proton spin relaxation 439
— transitions in phosphatidylcholine dispersion observed with interference refractometer 37
Phosphatidylcholine dispersion phase transitions observed with interference refractometer 37
Phospholipids, deuterated, as nonperturbing components for Raman studies of biomembranes 191
Photon correlation spectroscopy used to measure bacterial translation 79
Photoreceptors, *Limulus* ventral, time-course of sensitivity changes due to light adaptation and Ca injection 105
Picosecond kinetics of 580-nm ultrafast bacteriorhodopsin transient 121
Plane, distance of iron from in model deoxyheme, affects electronic configuration 179
Postirradiation incubation, effect on nuclear heterogeneous nuclear RNA size in murine cells 393
Post-stimulus time and interval histograms, relationship to timing characteristics of spike trains 413
Potassium, anion binding effects, and cation permeation through gramicidin channel 307
— channel blocker, 3,4-diaminopyridine 507
Potassium$^+$ conductance changes in squid giant axon, exponentiated exponential model 15
Potential and energy profiles and interactions between ions in electrostatic calculations for ion channel 209
Profiles, energy and potential, and ion interactions in electrostatic calculations for ion channel 209
Protein biosynthesis, role of guanine nucleotides 373
— intrinsic in membrane, electric field, and nerve excitability study 295
—, purple membrane, energy transfer in 49
—, purple membrane, fluorescence from chromophore 67
—, purple membrane, kinetics of 580-nm ultrafast transient 121
Proteins, blue, activation of electron transfer reactions 139
Proton spin relaxation study of molecular dynamics and freezing phase transition in tissues 439
Pumping mechanism of nematode esophagus 349
Purple membrane of *Halobacterium halobium*, energy transfer in 49
— membrane protein, fluorescence from chromophore 67
— membrane protein, kinetics of 580-nm ultrafast transient 121
Pyridine, 3,4-diamino-, potent K channel blocker 507
Pyrimidine dimers, two-step excision, and repair of ultraviolet damage in mammalian cells 265

Rabbit colon, Na transport across, *p*-mercuribenzene sulfonate blocks and reverses amiloride effect 125
— muscle fibers, chemically skinned, exponential rate processes and MgATP concentrations 97
Radioresistance, induced, in *Escherichia coli* strains with and without lambda lysogens 431
Raman studies of biomembranes, deuterated phospholipids as nonperturbing components 191
Rate processes, exponential, in chemically skinned rabbit muscle fibers with changing MgATP concentration 97
Receptors, light, time-course of sensitivity changes due to calcium injection and light adaptation in *Limulus* 105
Refractometer, interference, used to observe phosphatidylcholine phase transitions 37
Relations, phase, in lecithin-cholesterol surface films, "condensing" effect of cholesterol 489
Relaxation, proton spin, study of molecular dynamics and freezing phase transition in tissues 439
Repair, excision, of ultraviolet damage in mammalian cells 265
Resistance to radiation induced in *Escherichia coli* strains with and without lambda lysogens 431
Resonance, magnetic nuclear, proton spin relaxation study of molecular dynamics and freezing phase transition 439
Rhodopsin, bacterio-, energy transfer in 49
—, bacterio-, fluorescence from chromophore 67
—, bacterio-, kinetics of 580-nm ultrafast transient 121
Rigor, iodoacetate, and caffeine contracture compared in frog skeletal muscle 501

RNA, heterogeneous nuclear, effects of ultraviolet irradiation and incubation on size 393
Rotation, head, and exponential rate processes in chemically skinned rabbit muscle fibers 97
Rubidium, anion binding effects, and cation permeation interactions through gramicidin channel 307

Scattering, electrophoretic light, measures Ca^{2+} and Mg^{2+} effects on mobility of chromaffin granules 341
Scatter patterns, light, correlated for pure and mixed asynchronous microalgae cultures 29
Self-diffusion of human and *Lumbricus terrestris* hemoglobin, concentration dependence 453
Sensitivity changes due to calcium injection and light adaptation in *Limulus* ventral photoreceptors 105
Separation of erythrocytes, high-gradient magnetic 171
Skeletal muscle fibers, T system helicoids and striations seen by high-voltage electron microscopy 145
—muscle, frog, caffeine contracture and iodoacetate rigor compared 501
Skinned rabbit muscle fibers, exponential rate processes and MgATP concentration 97
Sodium, anion binding effects, and cation permeation through gramicidin channel 307
— channels in excitable membranes 283
— transport across rabbit colon, *p*-mercuribenzene sulfonate blocks and reverses amiloride effect 125
Sodium$^+$ conductance changes in squid giant axon, exponentiated exponential model 15
Spectroscopy, photon correlation, used to measure bacterial translation 79
Spike trains, relationship of post-stimulus time and interval histograms to timing characteristics 413
Spin relaxation, proton, study of molecular dynamics and freezing phase transition in tissues 439
Squid axon membrane, frequency domain analysis of asymmetry current 115
— giant axon, exponentiated exponential model of Na^+ and K^+ conductance changes 15
Stimulus, time after, and interval histograms, relationship to timing characteristics of spike trains 413
Stoichiometry of lecithin-cholesterol complexes in bulk systems 469
Striations and T system helicoids of frog skeletal muscle fibers seen by high-voltage electron microscopy 145
Sulfonate, *p*-chloromercuribenzene, and effect of amiloride on Na transport across rabbit colon 125
Surface films, lecithin-cholesterol, cholesterol's "condensing" effect analyzed 489
Synthesis of proteins, role of guanine nucleotides 373

Thallium, anion binding effects, and cation permeation through gramicidin channel 307
Thymine dimer excision in ultraviolet-irradiated human cells 249
Time, post-stimulus, and interval histograms, relationship to timing characteristics of spike trains 413
Tissues, freezing phase transition and molecular dynamics studied by proton spin relaxation 439
Trains, spike, relationship of post-stimulus time and interval histograms to timing characteristics 413
Transfer reactions, electron, of blue proteins, activation of 139
Transient, 580-nm ultrafast bacteriorhodopsin, kinetics of 121
Transition, freezing phase, and molecular dynamics in tissues studied by proton spin relaxation 439
—, phase, in phosphatidylcholine dispersion observed with interference refractometer 37
Translation of bacteria measured by photon correlation spectroscopy 79
Transport across rabbit colon, Na, *p*-mercuribenzene·sulfonate blocks and reverses amiloride effect 125
Traveling bands of chemotactic bacteria, modeled 1
T system helicoids and striations of frog skeletal muscle fibers seen by high-voltage electron microscopy 145

Ultrafast bacteriorhodopsin transient, 580-nm, kinetics of 121
Ultraviolet damage in mammalian cells, evidence for two-step excision of pyrimidine dimers 265
—-irradiated human cells, excision of thymine dimers 249
— irradiation and incubation effects on heterogeneous nuclear RNA size in murine cells 393

Ventral photoreceptors, *Limulus*, time-course of sensitivity changes due to light adaptation and Ca injection 105
Voltage, high-, electron microscopy, shows T system helicoids and striations in skeletal muscle fiber 145
